Week 7

Solution concepts; Nash equilibrium & Markov games, MiniMax-Q

This week

Mon 20 Apr 26 - Sun 26 Apr 26

Overview

We develop the most important concept in game theory: the Nash Equilibrium.

Your Learning Journey

3 TASKS

Wrap-up

Own-time

Your schedule for the week

Tasks	Complete By/Before	Time Expected
Listen to the mini podcast [experimental]	Before the seminar	15 minutes
Participate in the seminar & tutorial	End of the week	2 hours + 2 hours
Complete the essential tutorial components if you didn't manage this during the tutorial	End of the week	[individual]
Consolidate your learning with the extended podcast and chat space [experimental]	End of the Week	1 hour

AI-generated mini podcast setting the scene for the introduction to temporal difference learning (1'50')

The AI-generated podcasts are generated from resources curated by me and vetted before release. However, they are still not fully authoritative resources and you should not blindly trust them. In fact, part of our experiment with the podcasts is that you are meant to come back with questions about what is said in the podcasts that we can then discuss in the seminar and in the tutorials. In particular, for these discussions you should try to identify elements that you think might be incorrect!

Wrap-up

Check Your Knowledge

This is an opportunity to self-assess your understanding and get some early feedback in the lead up to your scheduled classes

[AI Review Podcast \[experimental \]: The Nash Equilibrium and the Correlated Equilibrium](#) M4A

96.6 MB

[AI Chat Space \[experimental \]: Equilibria in Game Theory](#)

Please keep in mind that these experimental AI chat spaces are not authoritative sources. While they work from curated authoritative sources they can and will make mistakes. Use them for guidance but make sure that you always check everything using the authoritative literature sources.
